CUSTOMER PROJECT SUMMARY

Major Food and Beverage Systems Provider

This leading solution provider for the food and beverage industry provides a complete range of solutions, from standalone equipment to complete connected production lines. They rely on software, products, and industrial automation systems from multiple sources, including open source, 3rd-party proprietary, and internally-developed software.

The Challenge

Internal policies and industry-recognized standards (IEC-62443) are driving a need for a secure OT software supply chain. In addition, the company's customers are requesting guarantees on the integrity of their software supply chain to mitigate risk exposure to vulnerabilities.

How Does aDolus Help?

- Provides a comprehensive view of their customer's installed software base
- Continuously monitors vulnerabilities within deployed software
- Generates and provides SBOMs and accompanying VEX documents at any point in the development process and postdelivery
- Integrates with existing enterprise platforms, processes, and workflows
- Provides tools for customer to build a proactive cybersecurity services offering

Additional Benefits Delivered
